

Innovation Manager

About Us

Vivo Surgical is Southeast Asia's pioneering surgical technology disruptor, engaged in developing innovative medical device solutions for better surgeries. An ISO 13485 certified company with international accreditations such as the US FDA and EU CE Mark, our products target the medical needs of the world through innovative applications of science & technology.

Our technologies redefine healthcare accessibility, allowing for widespread adoption of such modalities to improve patient outcomes. These encompass such fields as *in vivo* surgical LED lighting, portable endoscopy and minimally-invasive robotic surgery, which are strategically co-developed with leading healthcare institutions and KOL collaborators in territories such as the USA, UK, France, Germany, Brazil, Vietnam and Singapore.

Join us as we build towards our vision of being the Asia Pacific's leading medical device developer and manufacturer in surgical technology and robotics.

About The Role

We value the importance of having a robust Innovation Team that would serve as a key pillar for sustained commercial success. To that end, we are looking for an **Innovation Manager** to join us on this journey. You will oversee our co-development and co-innovation programs to extend our partnerships with healthcare and medical technology Centers of Excellence around the globe. The aims of these collaborations will be multi-fold: (1) clinical evaluation of our current products, (2) development of future product generations, and (3) introduce new product innovations into our existing portfolio. Your role will involve working with the different departments within Vivo Surgical as well as liaising in close tandem with our external partners such as leading health systems, local and international research institutes, start-ups and MNCs in the healthcare space.

Your responsibilities shall include the following:

- Driving a culture of innovation within our company
- Growing the company's international partnerships to enhance our current and future product offerings
- Liaising with CROs and hospital groups to plan and carry out product clinical studies
- Responsible for onboarding clinical KOLs and stakeholders to gather inputs for product improvement and possible expansion of device applications
- Engaging with healthcare and technology partners to assess and potentially integrate new devices/technologies for our existing product portfolio
- Managing contractual agreements with partners (research collaboration, consultancy, licensing, etc.)
- Leading internal/external innovation workshops to explore and develop new ideas, products, services and applications
- Staying up to date with medical device trends and new product releases to provide clear-sighted improvements to our product portfolio
- Overseeing local and international awards and grants submissions
- Working with top management to evaluate opportunities to drive future business growth

Your Qualifications & Experience

- Minimum Bachelor's degree in Engineering or Science
- At least 5 years' experience of product innovation in the medical device industry
- Possess a strategic mindset to organize and prioritize tasks for effective and timely delivery of project goals to meet the company's business objectives
- Have a creative and technical approach to problem solving and solution building
